***Reasons for Allowance***

The following is a statement of reasons for the indication of allowable subject matter: The prior art of record neither anticipate or rendered obvious the subject matter as claimed in the application.

Claim 1 recites:

A modulating apparatus of an on-channel repeater which receives a signal on one channel and distributes the signal on the same channel, comprising:

a baseband signal configuring means for configuring a baseband signal by combining an input field and a segment sync signal;

a pilot adding means for adding a pilot signal to the baseband signal;

an up-sampling means for up-sampling the baseband signal with the pilot signal added thereto;

a filtering means for filtering the up-sampled baseband signal with the pilot signal added thereto, wherein the filtering means generates an in-phase (I) signal and a quadrature (Q) signal and performs filtration;

a first digital-to-analog converting means for converting the filtered in-phase (I) signal into a first analog signal;

a second digital-to-analog converting means for converting the filtered quadrature (Q) signal into a second analog signal;

a first radio frequency (RF) up-converting means for directly up-converting the first analog signal into a first RF signal;

a second radio frequency (RF) up-converting means for directly up-converting the

Art Unit: 2617

second analog signal into a second RF signal;

an adding means for adding the up-converted first and second analog signals;

wherein the filtering means uses a window method using window functions of Kaiser, Hamming, Hanning, and Blackman.

AAPA and Razavi combined teach a modulating apparatus of an on-channel repeater comprising a baseband signal configuring means, a pilot adding means, an up-sampling means, a filtering means for a direct conversion RF transmitter. Winters disclosed windowing method for filter shaping. The prior art of record neither anticipate or rendered obvious for applying the filtering means uses a window method using window functions of Kaiser, Hamming, Hanning, and Blackman in an application of a repeater with a direct conversion I and Q RF modulator and transmitter.

Claim 1 is therefore allowable.

Claim 9 is a method claim that recites equivalent limitation to apparatus claim 1. It is therefore also allowable.

Claims 6, 8, 14, and 16 depend to their base claims, respectively. They are also allowable.
